## The Effect of Wildfires on Hunting Habitat . . .

August 2005

This wildfire resulted in the almost complete removal of vegetation within the burn area. To assist with restoration efforts it is very important that all motorized vehicle users obey road closures and use open roads only. This will reduce soil erosion, prevent noxious weed spread and allow plantings to establish. Expect to see changes in wildlife use of the burn as they move to other areas to find food and cover, and plan your hunt accordingly.
